## System Description

This is a ticket issuing application that helps developers or maintainers organize their tasks, bugs and discussions.

## Data Dictionaries

### Categories

Field Name	Data Type	Description	Example
id	int		
name	varchar		
color	bigint		

### Categories Users

This table describes the many-to-many relationship between users and categories

Field Name	Data Type	Description	Example
category_id	int		
user_id	int		

### Users

Field Name	Data Type	Description	Example
id	int		
ticketit_admin	boolean	Is this user an admin?	
ticketit_agent	boolean	Is this user an agent?	

## Ticket Audits

Field Name	Data Type	Description	Example
id	int		
operation	text	What happened on the ticket	
user_id	int	Action user id	
ticket_id	int	The ticket updated	
created_at	datetime		
updated_at	datetime		

## Tickets

Field Name	Data Type	Description	Example
id	int		
subject	varchar	Title of ticket	
content	longtext	Ticket description	
html	longtext (optional)	Ticket description but styled in html	
status_id	int		
priority_id	int		
user_id	int		
agent_id	int		
category_id	int		
created_at	datetime		
updated_at	bigint		

completed_at	timestamp (optional)	When was the ticket closed off dicussion	
--------------	----------------------	--	--

## Ticket Statuses

Field Name	Data Type	Description	Example
id	int		
name	varchar		
color	bigint		

## Ticket Priorities

Field Name	Data Type	Description	Example
id	int		
name	varchar		
color	bigint		

## Ticket Comments

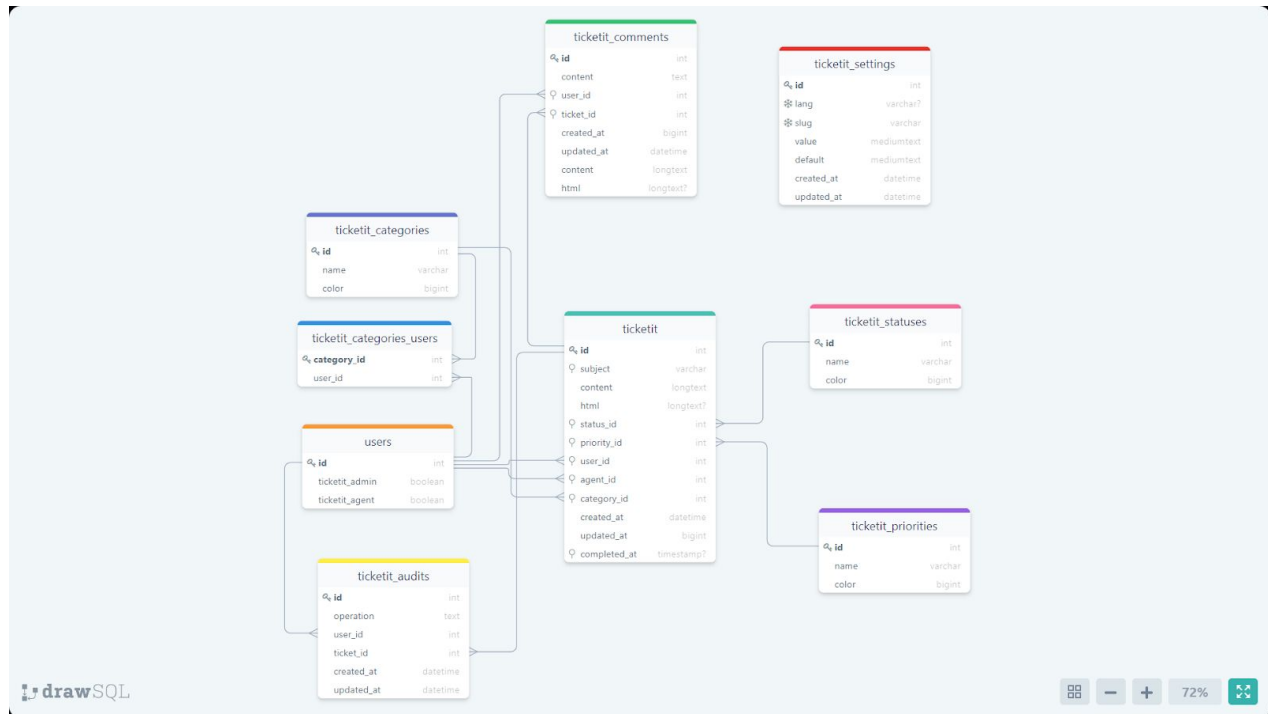

Field Name	Data Type	Description	Example
id	int		
content	longtext		
user_id	int		
ticket_id	int		
created_at	bigint		
updated_at	datetime		
html	longtext (optional)		

## Settings

Field Name	Data Type	Description	Example
id	int		
lang	varchar (optional)		
slug	varchar		
value	mediumtext		
default	mediumtext		
created_at	datetime		
updated_at	datetime		

## Entity Relationship Diagram

This diagram explains the relationships between every field of a table in the database.

## Select Statements using Different Functions

How many languages do we support?

```
SELECT COUNT(`lang`) FROM `ticketit_settings` GROUP BY `lang`
```

What is the last comment on ticket?

```
SELECT LAST(*) FROM `ticketit_comments` WHERE `ticket_id`=<ticket_id>
```

How many comments does a ticket have?

```
SELECT COUNT(*) FROM `ticketit_comments` WHERE  
`ticket_id`=<ticket_id>
```

## Select statements using Subquery

Select comments with a ticket of a certain priority

```
SELECT * FROM `ticketit_comments` WHERE `ticket_id` IN (SELECT `id`  
FROM `tickets` WHERE `priority_id`=<priority_id>)
```

Select comments with a ticket of a certain category

```
SELECT * FROM `ticketit_comments` WHERE `ticket_id` IN (SELECT `id`  
FROM `tickets` WHERE `category_id`=<category_id>)
```

Select ticket statuses that are assigned to a certain priority

```
SELECT * FROM `ticketit_statuses` WHERE `id` IN (SELECT `status_id`  
FROM `ticketit` WHERE `priority_id`=<priority_id>)
```

## Select statements using Count and Group functions

How many comments of each priority do we have?

```
SELECT `priority_id`, COUNT(*) as `count` FROM `ticketit` GROUP BY  
`priority_id`
```

How many comments does a ticket have?

```
SELECT COUNT(*) FROM `ticketit_comments` WHERE  
`ticket_id`=<ticket_id>
```

## Select statements using Different Joins

What is the category of each user?

```
SELECT * FROM `users`, `ticketit_categories_users` INNER JOIN  
`ticketit_categories_users` ON users.id =  
ticketit_categories_users.user_id
```

What are the comments for this ticket and the users they belong to?

```
SELECT * FROM `ticketit_comments`, `users` LEFT JOIN `users` ON  
ticketit_comments.user_id = users.id
```

## Insert Statements

Create a new category

```
INSERT INTO `ticketit_categories` (`name`, `color`) VALUES (<name>,  
<color>)
```

Create a status

```
INSERT INTO `ticketit_statuses` (`name`, `color`) VALUES (<name>,  
<color>)
```

## Create a priority

```
INSERT INTO `ticketit_priorities` (`name`, `color`) VALUES (<name>, <color>)
```

## Create a user

```
INSERT INTO `users` (`ticketit_admin`, `ticketit_agent`) VALUES (<is_admin>, <is_agent>)
```

## Comment on a ticket

```
INSERT INTO `ticketit_comments` (`content`, `ticket_id`, `user_id`, `html`) VALUES (<content>, <ticket_id>, <user_id>, <html>)
```

# Update Statements

## Update ticket status

```
UPDATE `ticketit` SET `status_id`=<status_id> WHERE `id`=<ticket_id>
```

## Update ticket priority

```
UPDATE `ticketit` SET `priority_id`=<priority_id> WHERE `id`=<ticket_id>
```

## Close ticket

```
UPDATE `ticketit` SET `completed_at` = Now() WHERE `id`=<ticket_id>
```

## Update priority color

```
UPDATE `ticketit_priorities` SET `color`=<color> WHERE  
`id`=<ticket_priority_id>
```

## Update status color

```
UPDATE `ticketit_statuses` SET `color`=<color> WHERE  
`id`=<ticket_status_id>
```

# Delete Statements

## Delete a comment

```
DELETE FROM `ticketit_comments` WHERE `id`=<user_id>
```

## Delete a ticket

```
DELETE FROM `ticketit_comments` WHERE `ticket_id`=<ticket_id>  
DELETE FROM `ticketit` WHERE `id`=<ticket_id>
```

## Delete a setting

```
DELETE FROM `ticketit_settings` WHERE `id`=<id>
```

## Delete a user

```
DELETE FROM `users` WHERE `id`=<user_id>
```
